

Who We Are

Conceive IVF Manila Inc. is an organized private medical facility run by highly-trained staff who underwent rigorous training and are proficient in their fields of expertise.

Our physicians, embryologists, and nurses underwent rigorous training in the different aspects of ART, the Kato way.

We use technology that is backed by evidence-based protocols, superior technology, and 30 years of experience in assisted reproductive technology (ART) by the Kato Ladies Clinic (KLC) of the Towako Group in Japan.

We offer compassionate patient care in a professional private practice environment. Originating from a well-established fertility center in Japan, Conceive IVF Manila Inc. has come to share this expertise and success to Filipino couples.

Location

If you're looking for a fertility clinic around Quezon City, Conceive IVF Manila Inc. is the best place to go to. It is located at Unit 02, 8th Floor, Hexagon Corporate Center, 1471 Quezon Ave. Brgy. West Triangle, Quezon City 1104.

CONCEIVE IVF Manila Inc.

A MEMBER OF KATO MEDICAL GROUP PHILIPPINES

A future you can conceive

Our Vision

Conceive IVF Manila Inc. will be the Assisted Reproductive Technology (ART) clinic of choice for couples who want to start their families.

Our Mission

Conceive IVF Manila Inc. is committed to provide safe, compassionate, and effective Assisted Reproductive Technology (ART) treatment backed by evidence-based practice and research for couples wanting to start their families.

Our Services

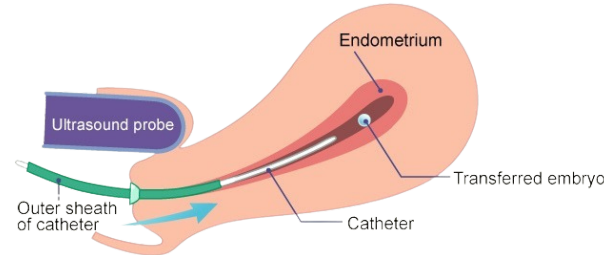

- Initial infertility workup (Ultrasound, HSG, Hormone Assay, Semen Analysis, etc.)
- Intrauterine Insemination (IUI)
- In Vitro Fertilization: (IVF-ICSI, Laser-Assisted Hatching, Transvaginal -Ultrasound-Guided Embryo Transfers)
- Rescue In Vitro Maturation of Immature Eggs (IVM)
- Egg Freezing
- Ovarian Tissue Cryopreservation
- Sperm Freezing
- Embryo Banking
- Testicular Sperm Extraction (TESE) and Percutaneous Epididymal Sperm Aspiration (PESA)
- MACS (Magnetic-Assisted Cell Sorting)
- DNA Fragmentation Test
- PGT-A, PGT-SR
- Embryo Culture using Time Lapse Machine

Why Conceive IVF Manila Inc.?

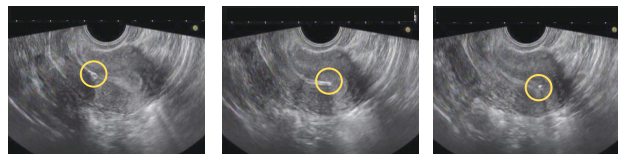

✓ Unique Retrieval Needle

Kato fertility centers use its own needle developed by the company, about half the global standard thickness of OPU needles. The blade at the tip has been processed using a special technique to minimize tissue damage. This very fine needle causes minimal pain and bleeding, thus, general anesthesia is not required. With this needle, egg collection can usually be completed without causing severe pain, allowing the patient to return home after a short period of rest (approximately fifteen minutes).

✓ Catheter used for Embryo Transfer

Ease in catheter manipulation is inversely proportional to softness, but a certain level of hardness is needed. Kato uses a catheter made of silicone about half or less in size of the ordinary catheter.

✓ Transvaginal Ultrasound-guided Embryo Transfer

All our embryo transfers are guided by transvaginal ultrasound, hence, a more precise placement of the embryo/s into the uterus is achieved.

✓ Patient-Friendly and Safe Protocols

Natural Cycle IVF

Natural Cycle IVF is the simplest yet the most delicate treatment method that has the least interference with the oocyte's natural development. No medication is given for stimulation. Through serial ultrasound and hormone assays, we monitor the growth of the lone follicle that spontaneously develops and retrieve it prior to ovulation. Thus, nature's process of natural selection is preserved.

Minimal Stimulation IVF

We start with oral medication plus the addition of mild doses of gonadotropins when necessary. To support the growth of a healthy cohort of oocytes, carefully selected types of drugs are used at low doses to achieve IVF that is **safe and body-friendly**, while maximizing the natural principles of oocyte development.

High Safety Profile

The added advantage of Natural Cycle and Minimal Stimulation IVF is the reduction in the incidence of Ovarian Hyperstimulation Syndrome (OHSS).

By employing Single Embryo Transfer (SET), we have reduced the twinning rate to less than 1%, thereby reducing the complications of multiple gestation.
